

Airedale Tree Guard

Manufactured from UK sourced, mild carbon steel of fully welded construction. The standard gtDales guard finish is hot dip galvanised to BS EN ISO 1461:1999. Alternatively a rich primer and a hardwearing polyester powder coating provides an outstanding finish. We are also able to supply the gtDales Collection guards in your corporate colours to match any specification design.

Installation:

The gtDales Collection guards are supplied in two halves for ease of transit and simply bolt together to form a complete guard. The tree guards are versatile and can be supplied with either a ground fixing or bolt fixing. The ground fixing allows the guard to be pushed into the ground and secured by guard spikes. Bolt fixing the guard permits the guard to be fixed into a tree grille with ease.

- Manufactured from mild carbon steel
- Fully welded construction
- Contemporary design
- High quality finish
- Simple installation
