

gt Resi-Grille

The gtResi-Grille has been specifically designed to be filled with gtResibond gravel. Once installed it provides a durable, hardwearing, yet porous finish to hard landscaped areas. gtResi-Grille with gtResibond can be used in areas where conventional means of mulching with loose materials may not be practical due to the constant displacement of the material, increasing maintenance time and costs.

Product Description:

The gt Resi-Grille has been developed after requests from contractors across the UK, requiring a tree grille that offers the aesthetic and porous properties of resin bound surfaces. The cast iron grille has a recess of 50mm, this allows the grille to be filled with gtResibond to create a porous surface. When filled, the gtResi-Grille supports the load of street traffic protecting the root ball of the tree. Not only does the gtResi-Grille look contemporary, it is robust, hard wearing and able to withstand trafficking from pedestrians. The gtResi-Grille also offers a clean surface - no rubbish, cigarette ends or leaves will become trapped within the Resi-Grille.

Matching guards also available.

Material:

Mild Steel Hop Dip Galvanised to BS EN ISO 1460:1999

Depth of gtResibond in grille:

50mm

Grille Size	Internal Aperture
1000mm x 1000mm	400mm
1200mm x 1200mm	400mm
