

Green-tree Roof Garden Substrate - Intensive

A blend of lightweight aggregate and the award winning Green-tree topsoil, the intensive roof garden growing media is ideal for green roof construction projects and particularly containerised planting. Lightweight in texture with good water-holding capacity, Green-tree Intensive Roof Garden Substrate promotes healthy plants and trees in a roof garden environment.

Benefits:

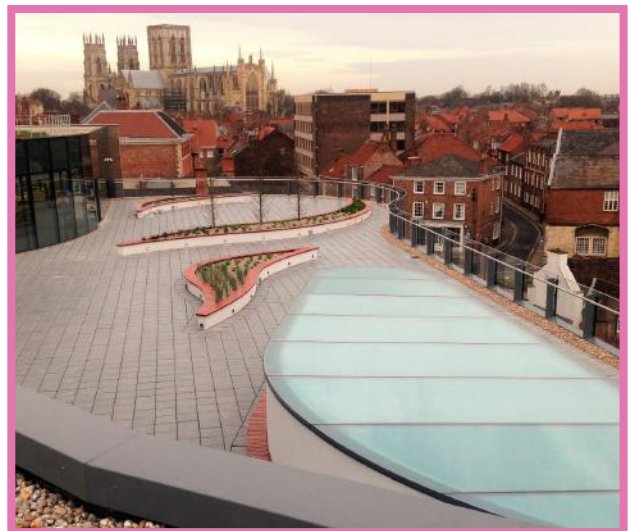

- Good levels of fertility
- Good water holding properties
- Excellent aeration properties
- Lightweight compared to standard soils
- A typical pH of 8.4 - ideal for a wide range of plantings
- Typical bulk density at saturation point 1.22 tonnes/m³

Build up of a Green Roof (Intensive)

Applications:

- Containerised planting
- Soft landscaping
- Tree planting
- Decorative planting
- Allotment planting
