

# gtCoir Pallets

Bioengineering with coir products is the proven approach for effective, yet sensitive design and construction. Natural materials and growing vegetation bring together biological, ecological and engineering concepts to both vegetate and stabilise eroding banks on lakes and rivers.

The coir material is the waste product from the coconut and is a specially prepared natural fibre. The product supports growth and development of plants that physically secure the bank or shoreline. Native UK wetland plants, use in our coir products are selected for their adaptation to varied physical conditions and also for invertebrates, fish and wildlife.

## gtCoir Pallets

Compressed and encased in a coir netting.

<b>Size</b>	2m x 1m = 2m <sup>2</sup>
<b>Weight</b>	(wet) 25kg approximately (dry) 12kg approximately
<b>Density</b>	5kg/m <sup>2</sup> approximately
<b>Coir Netting</b>	400g/m <sup>2</sup> , 35mm x 35mm mesh size
<b>Supplied</b>	Pre-established with UK Native Species or available unplanted
